Mohammed Selim

Senior Flutter Developer

+20 1000 9270 95 • mohammedselim10a@gmail.com • LinkedIn • GitHub

Summary

Results-driven Flutter Developer with 4+ years of experience building high-performance, cross-platform mobile applications for iOS and Android. Proven expertise in Clean Architecture, BLoC/GetX state management, Firebase, and REST API integration. Passionate educator and tech speaker who actively mentors students and contributes to the developer community through Google Developer Groups (GDG). Adept at delivering production-ready apps to the App Store and Google Play while driving CI/CD pipelines and code quality improvements.

EDUCATION

Modern Academy, Maadi, Cairo, Egypt 2016

Bachelor's degree in computer science — Overall Grade: Very Good
Relevant Coursework: Object-Oriented Programming (OOP), Data Structures & Algorithms, Database Management Systems, Software Engineering, Computer Networks, iOS Application Development, Artificial Intelligence (AI), Cybersecurity & Information Security.

PROFESSIONAL EXPERIENCE

Technova, Cairo May 2026 - present
Mobile Department Lead

- Lead and mentor the mobile development team, overseeing the end-to-end **Software Development Life Cycle (SDLC)**, from requirements analysis and technical planning to development, testing, and production deployment.
- Drive the architecture, design, and development of scalable, high-performance **iOS and Android applications**, following **Clean Architecture, SOLID principles, and industry best practices**.
- Provide technical leadership through **code reviews, technical documentation, architecture decisions, performance optimization, and engineering standards**.
- Manage development workflows using **Agile/Scrum methodologies**, including sprint planning, backlog refinement, task estimation, and cross-functional collaboration.
- Oversee **CI/CD pipelines, automated testing, version control (Git), and application release management** through the Apple App Store and Google Play Store.
- Collaborate with **backend developers, UI/UX designers, QA engineers, product managers, and stakeholders** to deliver reliable, user-focused mobile solutions.
- Identify and resolve complex technical challenges involving **API integration, application security, debugging, memory management, and performance bottlenecks**.
- Evaluate emerging technologies, including **Artificial Intelligence (AI)** and modern mobile development frameworks, to improve engineering productivity and application capabilities.

Digital Agency, United Arab Emirates (UAE) Jan 2025 – May 2026
Senior Flutter Developer

- Developed and maintained scalable, high-performance **cross-platform mobile applications** for iOS and Android using **Flutter and Dart**.
- Implemented **GetX State Management** for reactive UI updates, dependency injection, navigation, and efficient application state handling.
- Designed maintainable application architecture using **Clean Architecture, SOLID principles, and reusable Flutter widgets**.

- Integrated **MyFatoorah Payment Gateway** to enable secure in-app payment processing and seamless checkout experiences.
- Integrated **RESTful APIs, Firebase services, and third-party SDKs** to support application functionality and backend communication.
- Utilized **GitLab** for version control, branch management, merge requests, code collaboration, and development workflows.
- Collaborated with backend developers, UI/UX designers, and product stakeholders to deliver mobile applications aligned with business requirements.
- Diagnosed and resolved application bugs, optimized performance, and improved code quality through debugging, testing, and refactoring.
- Contributed to the complete **Software Development Life Cycle (SDLC)**, including feature development, testing, and deployment to the **Apple App Store and Google Play Store**.

Dafa, Giza - Haram **July 2023 – Nov 2024**
Flutter Developer

- Developed, maintained, and enhanced **cross-platform mobile applications** for iOS and Android using **Flutter and Dart**, delivering scalable and user-friendly mobile solutions.
- Implemented **Clean Architecture** and modular application design to ensure separation of concerns, code maintainability, scalability, and testability.
- Integrated **Stripe Payment Gateway** to support secure payment processing and seamless in-app checkout experiences.
- Integrated **Firebase services** and RESTful APIs to support mobile application functionality and backend communication.
- Collaborated with **cross-functional teams**, including Backend Developers, DevOps Engineers, QA Testers, and UI/UX Designers, throughout the **Software Development Life Cycle (SDLC)**.
- Worked closely with the **DevOps team** to support mobile application builds, release management, deployment processes, and publishing to the Apple App Store and Google Play Store.
- Used **Git and GitHub** for version control, feature branching, pull requests, and collaborative development workflows.
- Developed and customized native iOS functionality using **Swift**, integrating platform-specific features into Flutter applications when required.
- Participated in application debugging, bug fixing, performance optimization, and quality assurance to improve mobile application reliability and user experience.

TECHNICAL PROJECTS

Banah – Automotive Classifieds & Marketplace Platform **July 2026 - Present**
(**Lead Flutter Developer**)

- Led end-to-end development of a production automotive marketplace application using Flutter, Dart, Clean Architecture, and SOLID principles.
- Architected 13+ feature modules using BLoC/Cubit, GetIt Dependency Injection, and modular architecture, separating business logic from the UI.
- Engineered real-time chat using Cloud Firestore, integrating voice messages, multimedia attachments, and Firebase Cloud Messaging (FCM) for push notifications.
- Integrated RESTful APIs with Dio, implementing authentication token-refresh interceptors, centralized error handling, and offline caching using Hive.
- Implemented multilingual localization (i18n/l10n) supporting Arabic, English, and Urdu, with bidirectional RTL/LTR layouts.
- Managed iOS and Android releases to the Apple App Store and Google Play, implementing OTP authentication, account deletion, and Firebase Crashlytics monitoring.
- Mentored and onboarded 2 Flutter developers, delegated feature modules, and maintained ownership of mobile architecture and technical decisions.

App Links : IOS , Android

Taqseem– Real Estate Fractional Investment Platform **February 2026 – April 2026**
(**sole Developer**)

- Independently designed and developed a real estate fractional investment and crowdfunding mobile app using Flutter, Dart, Clean Architecture, and SOLID principles.
- Architected 10+ feature modules using BLoC/Cubit, GetIt dependency injection, and fpdart (Either/Failure) for scalable state management and maintainable code.
- Engineered financial workflows, including property share purchasing, installment plans (up to 10 installments), investment portfolio tracking, and digital contract PDF generation.
- Integrated Keycloak (OAuth 2.0 / OpenID Connect) with biometric authentication, phone OTP verification, and KYC identity verification workflows.
- Integrated RESTful APIs using Dio with JWT token-refresh interceptors, centralized error handling, and local caching with Hive and Secure Storage.
- Implemented Firebase Cloud Messaging (FCM) push notifications and Arabic/English localization with RTL/LTR support.
- Published to Google Play, including account deletion workflows for store compliance.

Dieaya Plus – Retail Deals, Coupons & Local Commerce Platform **Jan 2025 – July 2026**
(**sole Developer**)

- Independently designed and developed a retail deals and local commerce mobile app in Flutter and Dart, with 12+ feature modules using GetX for state management, routing, and dependency injection.
- Built core commerce features, including digital discount coupons, merchant directories, promotional banners, product catalog browsing, and favorites.
- Implemented deep linking (App Links) for social sharing and direct navigation to specific products, stores, and coupons.
- Integrated RESTful APIs from a PHP backend using Dio (custom interceptors, centralized error handling), SMS OTP authentication (Pinput), and local caching with GetStorage and SharedPreferences.
- Implemented Firebase Cloud Messaging (FCM) push notifications and Arabic/English localization with RTL/LTR support.
- Published and maintained the app on the App Store and Google Play, including account deletion workflows for store compliance.

SKILLS

Programming languages: Dart, Kotlin, Swift, Python, JavaScript, TypeScript, SQL

Mobile development: Flutter, Android (Kotlin), iOS (Swift), Cross-Platform Mobile Development

Frontend: HTML, CSS, JavaScript, TypeScript, Angular

Frameworks & libraries: BLoC/Cubit, GetX, GetIt, Dio, Hive, GetStorage, SharedPreferences, fpdart, Equatable

Architecture & practices: Clean Architecture, SOLID Principles, Dependency Injection, Repository Pattern, REST APIs, JSON, Offline Caching, Git

Backend & cloud: Firebase (Auth, Cloud Firestore, Cloud Messaging/FCM, Storage, Crashlytics), REST API integration with Spring Boot, .NET, Node.js, and PHP backends, Keycloak (OAuth 2.0 / OpenID Connect), JWT

Mobile features: Push Notifications, Deep Linking, Biometric Authentication, SMS OTP, Localization (Arabic RTL / English LTR), App Store & Google Play Publishing

Languages: Arabic (native), English (fluent)
